_Squat stretch:_ Sit in a deep squat and put your palms together and push your elbows into the inside of your knee as you push your knees into your elbow.

_Dumbbell goblet squat:_ Position the dumbbell vertically at your chest. Descend by pushing your hips back and bending the knees simultaneously. Once your thighs are at least parallel with the floor (or as low as you can comfortably go), reverse the movement.

_Mountain climber jumps:_ Start in a top press-up position with your hands flat on the floor and your feet about shoulder-width apart. Then explosively bring your knees to your chest, landing your feet on the floor and jumping back out to the starting position.

_Mountain climber:_ Start in a top press-up position with your hands flat on the floor and your feet about shoulder-width apart. Bring one knee toward your chest and return it to the starting position. Replicate the movement with your other leg and continue alternating legs.
**Dumbbell lunges:** Stand with dumbbells at your side, palms facing your body. Step forward as far as you can with your one leg, bending your trailing knee so it almost touches the floor. Use the heel of your stepping foot to push your upper body back to the starting position, then repeat with the opposite leg.

**Push-up with shoulder tap:** Start in a top press-up position with your hands flat on the floor and your feet about shoulder-width apart. Lower your chest toward the ground by bending your elbows and pointing them behind you. Push back up to straighten your arms into top press-up position, then lift your right hand to tap your left shoulder at the top. Repeat with the opposite arm tapping.

**Dumbbell squat press:** Stand with your feet shoulder-width apart, hold dumbbells next to your shoulders. Descend by pushing your hips back and bending the knees simultaneously. Once your thighs are at least parallel with the floor (or as low as you can comfortably go) push your body up from the squat as you press the dumbbells over your head. Your biceps should be by your ears. Lower the weights and repeat.

**Jumping jacks:** Standing with feet together and your arms to your side, jumping to a position with the legs spread wide and the hands going overhead, and then returning to a position with the feet together and the arms at the sides.

**Dumbbell step up:** Start by standing in front of a box or bench around knee height, holding dumbbells at your sides with arms straight. Place one foot firmly on the box or bench,
then drive through that foot to lift your body up until that leg is straight and your opposite foot is elevated. Step down and repeat with the opposite leg.

*Side plank:* Lie on your side, legs extended in a straight line from hip to feet. The elbow of your other arm is directly under your shoulder. Make sure your head is directly in line with your spine. Engage your abdominal muscles, drawing your navel toward your spine. Lift your hips and knees from the floor. Your torso is straight in line with no drooping or bending. Hold this position.

*Dumbbell shoulder press:* Holding the dumbbells by your shoulders, extend through your elbows to press the weights above your head and slowly return to the starting position.

*Jump squat:* Stand tall with your feet hip-width apart. Descend by pushing your hips back and bending the knees simultaneously. Once your thighs are at least parallel with the floor (or as low as you can comfortably go), push your feet into the ground to explode off the floor and jump as high as you can. Bend your knees when you land, and then immediately drop back down into a squat.

*Leg raise:* Lie on your back with legs straight and together. With your legs together and as straight as you can, lift them all the way up toward the ceiling until your butt comes off the floor. Slowly lower your legs back down till they almost touch the floor. Raise your legs back up.

*Dumbbell renegade:* With dumbbells or kettlebells, get into a press-up position with a weight in each hand. Raise one of
the weights, supporting yourself on the other arm. Pull the weight upward until your elbow is slightly higher than your torso, then lower it back to the ground. Repeat with the opposite arm.

*Jump rope:* Hold the rope, standing in front of it while keeping your hands at hip level. Rotate your wrists, pulling the rope underneath to swing the rope and jump. You can jump with both feet at the same time, one foot at a time, or alternating between feet.

*Push-up:* Start in a top press-up position with your hands flat on the floor and your feet about shoulder-width apart, placing your hands slightly wider than your shoulders. Lower your body until your chest nearly touches the floor, then push yourself back up. Repeat.
